

frameless lightbox

Interchangeable Graphic

The Frameless light box is as you'd expect totally frameless which gives you complete image illumination edge to edge, without a frame obstructing the graphic.

These light boxes are made from either PVC or aluminium, depending on the size required. With an opal acrylic diffuser panel and a clear front cover, this can be quickly and easily removed to change the graphic panels and access the tubes.

Slim and lightweight, these frameless light boxes can be used in single or tiled combinations.
